

#432B2
(Probe sold separately.)

Sound Enclosure

Sonicators are very loud devices and will cause discomfort to the user and anyone nearby. The Sound Enclosure reduces noise by approximately 20 dB and is compatible with all accessories.

In addition to reducing noise, the Sound Enclosure has an internal support rod and converter mounting system. Note that some heavy accessories require additional parts for added safety (Microplate horn and high throughput horns).

Two ports are located on each side of the enclosure for coolant tubing or a temperature monitoring probe. The interior walls are lined with acoustic foam and the door has a window so experiments can be visually monitored.
